Education

San Diego State University

Bachelor of Science, Aerospace Engineering

- Dean's List (Spring 2023, 2024)

Skills and Competencies

- **Vehicle & Powertrain Systems:** Vehicle dynamics, electric vehicle systems, propulsion systems, energy storage systems, subsystem integration, performance testing, reliability, serviceability, drivability awareness
- **Testing & Data Analysis:** Vehicle/component testing, test planning, validation, troubleshooting, root cause analysis, failure analysis, performance trends, preliminary modeling of physical systems, engineering calculations
- **Data & Software:** MATLAB, Python, Excel, data processing, data visualization, Microsoft Office, PowerPoint, Word, technical presentations
- **CAD & Engineering Documentation:** SolidWorks, CAD modeling, assemblies, engineering drawings, BOMs, design revisions, build documentation, project documentation
- **Manufacturing & Integration:** Fabrication, assembly, prototyping, mechanical structures, mounting hardware, test support, hardware integration, build readiness

Experience

VTOL Quadcopter Biplane UAV Drone

January 2026 – Present

Manufacturing Lead

- Lead CAD design, manufacturing planning, fabrication support, assembly, testing, troubleshooting, and documentation for a VTOL UAV platform with moving flight surfaces and integrated propulsion systems
- Create SolidWorks models, assemblies, engineering drawings, BOMs, and build documentation to support prototype development, fabrication, design reviews, and testing activities
- Identify build and integration issues, support root cause troubleshooting, and implement design revisions to improve prototype reliability, repeatability, and assembly quality

AZTEC ELECTRIC RACING (FSAE)

October 2022 – Present

Aerodynamics Team Member (2022-2024), Energy Storage Team Member (2024-Present)

- Design, fabricate, assemble, test, and troubleshoot mechanical and structural components for a high-performance Formula SAE electric race car
- Support vehicle layout, mounting hardware, aerodynamic structures, energy storage packaging, and subsystem integration with attention to performance, reliability, serviceability, safety, and build quality
- Assist with testing, inspection, troubleshooting, and root cause analysis of vehicle components and subsystem integration issues
- Collaborate across electrical, structures, aerodynamics, and energy storage teams to support design decisions, integration planning, build readiness, and project documentation
- Participate in failure analysis and iterative redesign efforts, contributing to an estimated **30% reduction in recurring component failures**
- Communicate technical issues, test observations, and corrective actions clearly to support improved vehicle reliability and performance.

SAN DIEGO STATE UNIVERSITY ROCKET PROJECT

October 2023 – Present

Project Icarus Team Member

- Support design, fabrication, assembly, integration, and testing of rocket hardware and mechanical structures

UNDERGRADUATE RESEARCH – AEROSPIKE NOZZLE

September 2025 – Present

- Support propulsion research through data analysis, documentation, and evaluation of performance trends
